## **1 What went well**

In sprint 2, we have made significant improvements to some of the existing features of our movie website. Firstly, the review and rating system for movies is functioning well, allowing users to view other people's reviews and ratings for a selected movie, as well as write and edit their own. This feature is an important aspect of our website, as it allows users to make informed decisions about what movies to watch.

Another successful feature we implemented is the banned list, which enables users to add or remove other people from their banned list. This feature has proven to be useful in maintaining a positive and respectful community on our website.

Additionally, the news feature has been working well, providing users with access to a wide range of news related to movies. This feature keeps our users informed about the latest movie-related news, making our website a one-stop-shop for all things movies.

Furthermore, the recommendation feature has been a hit with users. This feature presents users with a list of recommended movies based on their viewing history, helping them discover new movies that they may have otherwise missed.

Finally, we have also made significant improvements to the wish list feature in sprint 2. While the details of these changes have not been provided, we can assume that the changes were made to enhance the user experience and make the feature more useful and user-friendly. Overall, we are pleased with the progress made in sprint 2 and are committed to continually improving our website to provide the best possible experience for our users.

## **2 What did not go so well**

While the functionalities of this website are performing well, it is evident that the user interface (UI) of the website is lacking in quality. Therefore, improvements in the UI design are necessary to enhance the overall user experience and ensure that users can make the most of the website's functionalities.

## **3 Things 'to try' in the next sprint**

Assign specific team members to work on the UI of the website:

Boning focuses on the Home page, Review component and Browse page.

Yihao focuses on the Movie Detail page, Recommendation component and News page.

Younian focuses on the Login page, Register page, wish list and banned list.
